PLA GROUND FORCES, CANTON MILITARY REGION, PRC (S)

ABSTRACT

1. (TSRU) This report discusses the Peoples Liberation Army's (PLA) main ground force units in the Canton Military Region in the People's Republic of China (PRC). The functions and locations of these units were identified primarily from KEYHOLE imagery.

2. (U) This report includes four location maps, three annotated photographs, and four tables listing the main force units by unit subordination.

INTRODUCTION

3. (TSRU) The ground forces in the Canton Military Region (CMR) have the same general organizational structure as the ground forces observed throughout the PRC--the rule of three. Subordinate to CMR Headquarters (Figure 1 and Table 1) are three armies (Figures 2, 3, and 4 and Tables 2, 3, and 4, respectively) and various independent units (Table 1). The independent units include an artillery division, an antiaircraft artillery (AAA) division, a signal regiment, two engineer regiments, five motor transport regiments, a probable airborne/reconnaissance unit, and a military region probable training unit.

4. (TSU) The numbered unit designators used in this report were acquired from referenced document 1.

BASIC DESCRIPTION

5. (TSR) Armored units have been observed in each of the three armies; however, only one tank regiment has been confirmed from imagery.

6. (TSRU) There are two armored units in the 41st Army (Table 2), one of which is a probable tank regiment at Kuei-lin (121st Infantry Division). The facilities at Kuei-lin have the capacity to support a tank regiment. However, since September 1974 the largest number of tanks observed at Kuei-lin has been 12 which equates to a company-sized unit. The other armored unit in the 41st Army is the 327th Tank/Assault Gun (TAG) Regiment at Ho-chun (122nd Infantry Division). No armored vehicles have been observed at Ho-chun since January 1972, and when last observed in July 1978 the tracked-vehicle, driver-training courses did not appear to be active.

7. (TSRU) There are two armored units in the 42nd Army area (Table 3). The 329th Tank Regiment is at Chang-ning (124th Infantry Division) where, in November 1976, 111 tanks were observed. The other armored unit is a part of the military region training unit at Pi-tsun and is subordinate to CMR Headquarters.

8. (TSRU) The only armored unit observed in the 55th Army is at Chang-chi (164th Infantry Division; Figure 5). Tanks were first observed at Chang-chi in 1976, and until July 1978 the maximum number of tanks observed was nine. In July 1978 elements of a possible tank regiment--32 tanks and eight possible SU-76 assault guns (top photo)--were observed. A tank-gunner firing trainer (bottom photo) was constructed at Chang-chi between November 1976 and October 1977. Three additional vehicle storage buildings with the capacity to house tanks were also constructed during this time.

9. (TSR) Since the 42nd Army has a tank regiment and the 41st Army probably has a tank regiment, the establishment of a tank regiment in the 55th Army may be forthcoming. The presence of tanks in 1976, the increased number of armored vehicles observed in July 1978, and the construction of the tank-gunner firing trainer and storage building at Chang-chi indicate that Chang-chi will probably be the location of a tank regiment in the 55th Army.

Artillery

10. (TSR) Nineteen artillery-associated installations have been observed in the CMR. Three of these installations house army-level regiments, nine house division-level regiments, six house an independent artillery division, and one is a part of the CMR training unit.

11. (TSR) Miniature/terrain model artillery firing ranges have been constructed at 17 of these 19 installations since 1974. The two installations without artillery ranges are associated with the independent 1st Artillery Division.

12. (TSR) Since 1976 the 1st Artillery Division, headquartered at Shao-kuan, has occupied five installations in the Weng-cheng/Hsin-chiang area. These installations had previously been occupied by an infantry division. The construction of four-bay storage buildings with the capacity to store field artillery pieces and attached cargo trucks and the construction of miniature/terrain model firing ranges indicate that the occupancy of these installations is permanent. Headquarters units and the rocket launcher regiment have probably remained at Shao-kuan. However, no equipment except cargo trucks has been observed at Shao-kuan since September 1976.

Antiaircraft Artillery

13. (TSRU) AAA units have been observed with each of the armies, four of the nine infantry divisions, the 329th Tank Regiment, and the 70th AAA Division.

14. (TSRU) The new structure of army-level AAA regiments--eighteen 37mm, twenty-four 57mm, and six ZPU-4 antiaircraft (AA) guns--has been observed at two installations, Sha-pu-hsu (41st Army) and Li-lin-hsu (42nd Army).

15. (TSR/SPOKE) On imagery of November 1977 an AAA exercise was observed in progress at Pei-po AAA Exercise Area. Approximately 400 AA guns were observed. Collateral sources indicate that the 70th AAA Division and a 41st Army organic AAA regiment were involved in this exercise.² The number of AA guns observed indicates that other units were also involved. These could have been units (other than ground force subordinate units) that are observed in the vicinity of the airfields, naval bases, and urban areas throughout the CMR. Exercises also occurred in this area in 1973, 1974, 1975, and 1976.

Infantry

16. (TSR/SPOKE) There are nine infantry divisions in the CMR--three in each army. Since December 1975 five of these divisions have changed location. In December 1975 the 164th and 165th Infantry Divisions of the 55th Army switched locations³ and in December 1976 the 121st and 123rd Infantry Divisions of the 41st Army switched locations.⁴ These switches in location may have occurred in order to improve area familiarization and troop movement techniques. In March 1976 the 126th Infantry Division of the 42nd Army moved to the Lei-yang area from the Weng-cheng/Hsin-chiang area.⁵

17. (TSR/SPOKE) The 126th Infantry Division is now probably located at Tsao-shih Army Barracks AL-1 just south of Lei-yang. The barracks at Tsao-shih is the only barracks in the Lei-yang area with the capacity to house an infantry division. The construction of a troop obstacle course in the old TAG regimental area and a miniature/terrain model artillery firing range indicates that a main force unit is at this barracks.

18. (TSR) Troop obstacle courses, antitank ditching, and athletic fields have been constructed at most of the barracks areas in the past several years. The construction of these facilities indicates that increased emphasis is being placed on troop training.

Airborne/Reconnaissance

19. (TSR) The only airborne/reconnaissance unit outside the Wuhan Military Region has probably been observed in the Canton area. Imagery has confirmed the existence of airborne-type training facilities at two installations. One installation has been observed for some time in Canton. The second installation has recently been identified in the Lung-kuei-shih area just north of Canton. Training equipment at these two installations consists of an aircraft fuselage mockup, jump stands, troop obstacle courses, a modified swing-landing trainer, and a swing-landing tower (Figure 6). On imagery of August 1977 three parachutes were seen at the swing-landing tower at the Canton installation.

20. (TSRU) River crossing units have been observed at two installations in the CMR. One unit is at Chang-sha where river crossing equipment was first observed in July 1976. The highest count of equipment has been 134 TPP (heavy ponton bridge) sections, which were observed in

October 1977 (Figure 7). The size of the facility is adequate to house two ponton bridge regiments--144 ponton sections equate to two regiments. The other installation is approximately 13 nautical miles west of Hui-chou along the Tung Chiang (River) and possibly houses elements of the 22nd Ponton Bridge Regiment. This installation was identified on imagery of December 1977. Seventeen ponton sections on vehicles were observed in the barracks area, and five ponton sections and two probable BMK-150 power boats were observed in the water.

Hainan Area Command, Hainan Island

21. (TSRU) The only main force ground unit observed on Hainan Island is the 47th Motor Transport Regiment at Hai-kou. Ground forces on this island consist of at least two garrison divisions, a possibly independent artillery regiment, and other local forces.
